Petition Against Privatisation of Power Stations and Electricity Retailers

To the Honourable the Speaker and Members of the Legislative Assembly of New South Wales in Parliament assembled.

This petition of citizens of New South Wales brings to the attention of the House the Government's stated intention of privatising, by sale or lease, the generation and retailing of electricity in New South Wales. The petitioners regard this as a threat to the cost and continuity of electricity supply and believe that this essential, profitable public utility should remain a public asset. Privatisation would also compromise the development of alternative energy sources in response to the threat posed by global warming.

The undersigned petitioners therefore ask the Legislative Assembly to take relevant actions to prevent sales or leases and to retain as public assets the infrastructure and systems for generation and retailing electricity.
